

Custom Hot Stamp Guide

We want your design to jump off the disc as much as you do. A great hot stamp design reflects the character of your event or club and can raise funds to make them thrive!

1. Maximum diameter imprint area :
Golf Discs - 5 1/4"
Minis - 2 3/8"
Pulsar/Supernova - 6 1/2"

2. Designs need to be submitted as 100% black on white, camera ready art, with no grayscale. 300 ppi or higher is necessary to achieve a good stamp. We prefer electronic submissions to speed up the process, if that is not possible, we can accept clean hard copies of your design.

3. Avoid solid coverage areas larger than a thumbnail. Large solid areas do not stamp well because air gets trapped and causes unwanted drop outs. Outlining can help in most cases.

*Minimum line width: .5 points, 0.007"

*Maximum line width: 18 points, 0.25"

4. Areas of detail that are too small may bridge (fill in). Particularly when a very fine line is created between 2 dark areas. Very fine lines in conjunction with solid areas can produce "cut-through" from uneven distribution of stamping pressure.

5. Text sizes should be 12 points or higher to avoid letters bridging. Select fonts that are well spaced within each character.

**While these are both 12 point fonts, the second example will fill in

6. Whenever possible, leave space in the center of your design. The sprue on the underside of the disc can cause drop outs.

*We can work with most file formats. Please call for assistance in design transmission.

*Custom stamping has a minimum order of 100 discs (25 discs minimum per model). Qualified tournaments may order as few as 50 discs (25 discs minimum per model).

*Please allow 3-4 weeks to process and ship your order.

*Call for model availability and any other questions not answered here.
